Appendix A: Data Tables 12

Introduction

Demographics

In total, 3,987 Ulster County students in grades 7-12 completed the survey. This sample exceeds the minimum to allow a 5% margin of error and 95% confidence interval. An estimated 37% of students in the County took the survey, based on counts reported in the New York State School Report Cards for the 2016-2017 school year. Participation decreases as the age of the students increase (Figure 1).

Of the overall sample, 50% are male and 50% are female. Approximately 74% of participating students are White, 18% are Hispanic, 15% are of multiple races, 7% are Black, 3% are Asian American and 3% are Native American or Alaska Native, less than 1% are Native Hawaiian-Pacific Island (Figure 2). 94% of the respondents report being under the age of 18.

Figure 1

Race/Ethnicity

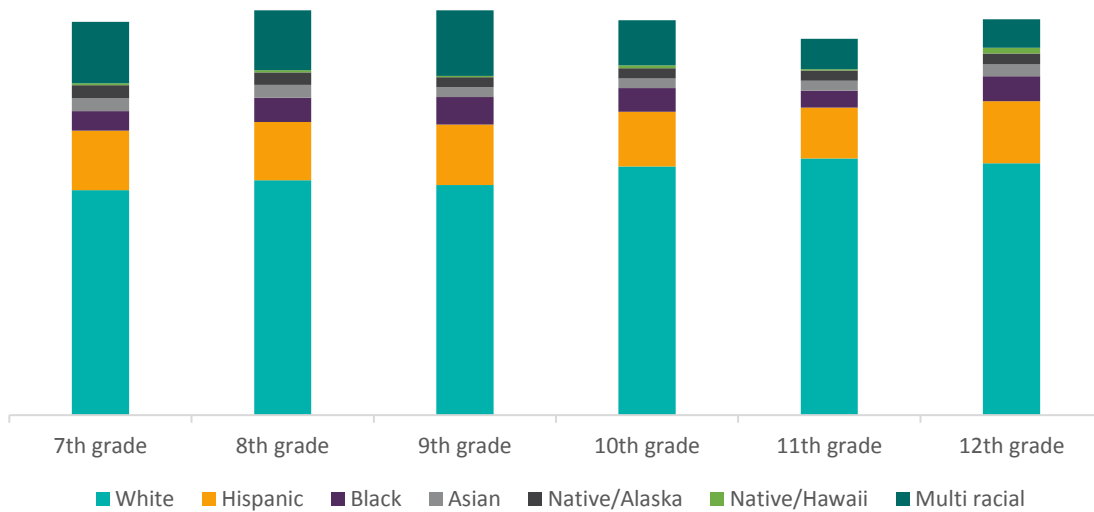

Figure 2

Tobacco

Use and Prevalence

According to the 2016-2017 Ulster County survey data, 84% of students have never tried cigarettes. Use does become more prevalent as age increases. 52% of students who have tried smoking were 13 years of age or younger at the age of initiation; 31% were either 14 or 15 when they first tried smoking tobacco (Figure 3). Only 7% of seventh graders have tried cigarettes, while 32% of 12th graders have at least had a puff of a cigarette (Figure 4). Of those surveyed, 96% have not smoked within the past 30 days. Of those who have smoked within 30 days, 55% smoke less than a cigarette per day and 92% smoke less than a pack a day.

Figure 3

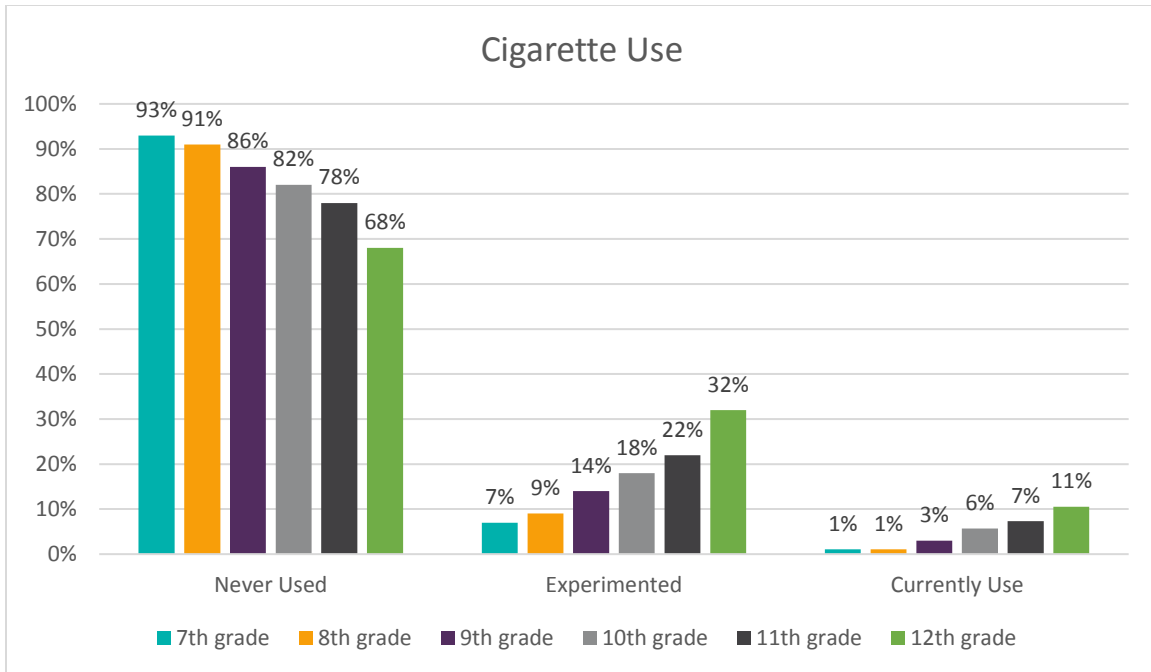

Figure 4

Perception

According to 2016-2017 survey results, 15% of respondents believe there is no (or little) health risk from smoking one or more packs of cigarettes a day (Figure 5). Smokeless tobacco is consumed by 3% of surveyed youth.

Figure 5

Alcohol

Use

According to 2016-2017 survey data, 27% of students report some alcohol consumption within the past 30 days, use increases with age (Figure 6). Respondents also reported binge drinking within the past 30 days, with 11% of 9th graders and 31% of 12th grade students reporting this behavior (Figure 7). Further, 5-14% of high school students report binge drinking at least once in the past 30 days.

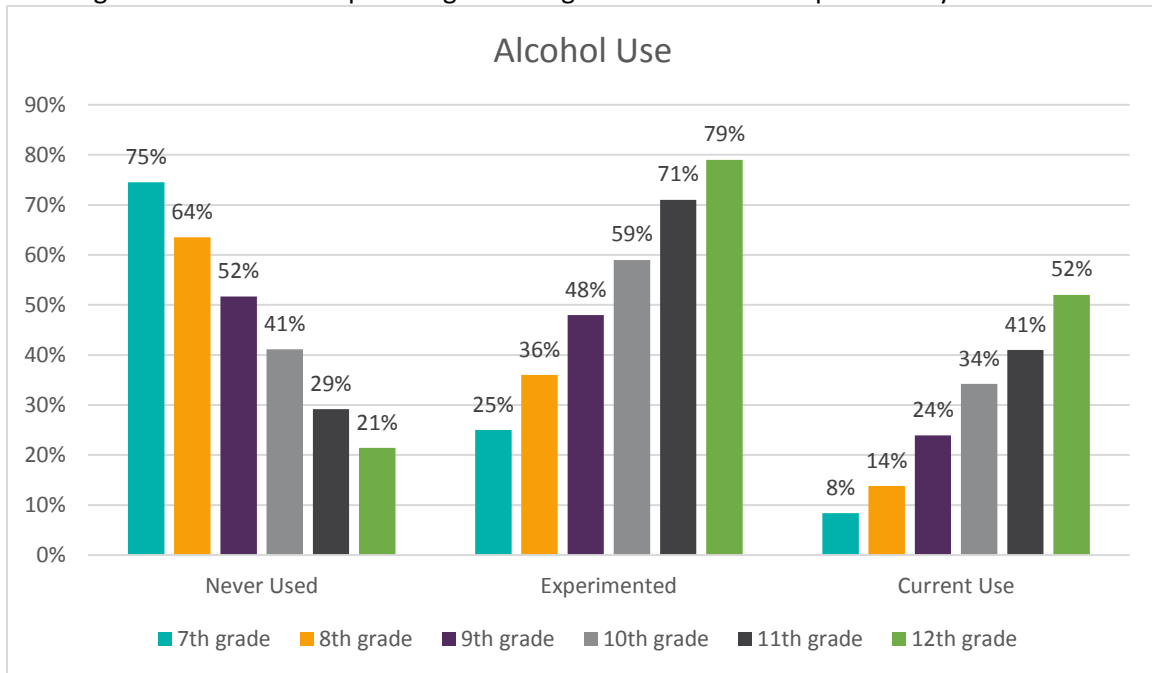

Figure 6

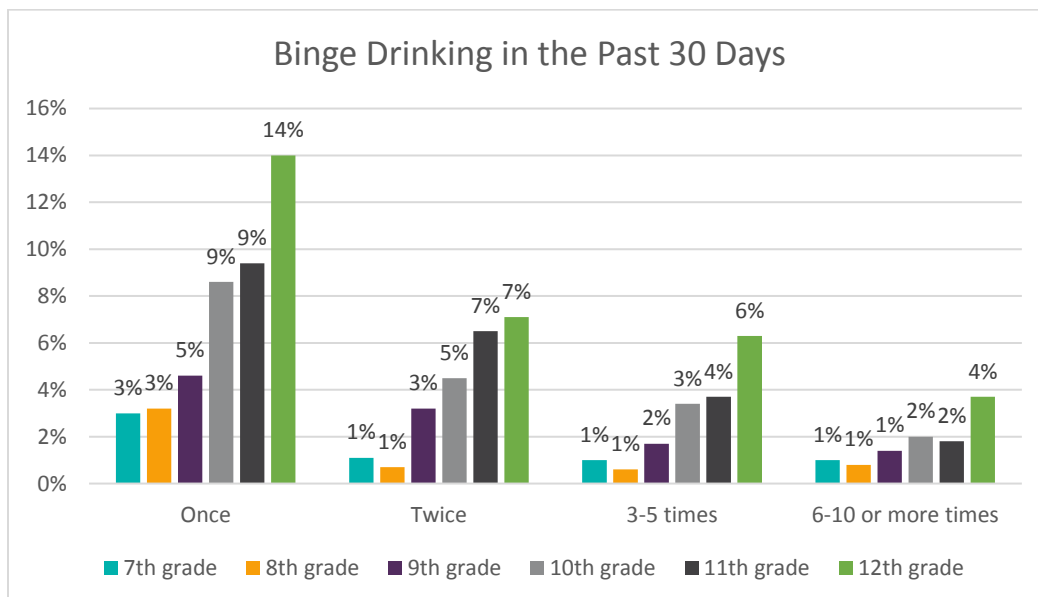

Figure 7

Influence

According to 2016-2017 survey data, 78% of respondents feel it is wrong to drink alcohol regularly (Figure 8). Nonetheless, respondents have experimented with alcohol; 26% of 7th graders, 37% of 8th graders, 48% of 9th graders, 59% of 10th graders, 71% of 11th graders, and 79% of 12th graders claim that they have tried alcohol at some point. 20% of 12th graders have consumed alcohol 40 or more times and 21% of 12th graders have never tried it. To obtain alcohol, youth rely on parents and peers. Respondents most commonly consume alcohol at their own home or the home of an acquaintance.

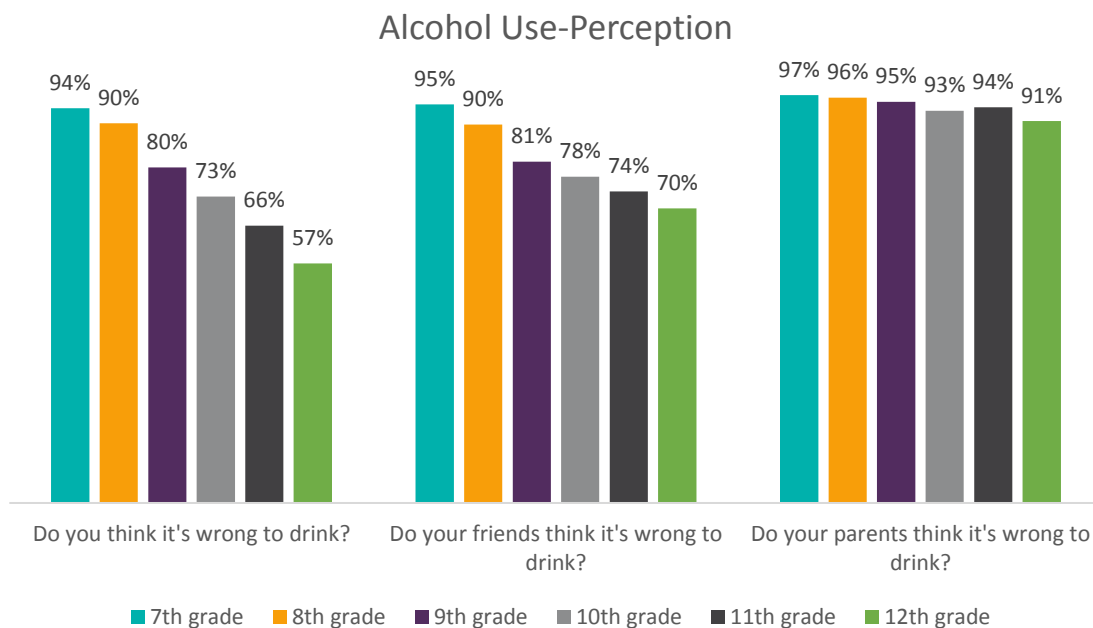

Figure 8

Alcohol Use: Perceived Risk

According to the 2016-2017 survey data, students report an understanding that alcohol can be harmful; 76% state that people risk great or moderate harm by binge drinking. Interestingly, the assessment of risk rises with age as 12th graders being the most likely to view drinking as risky (Figure 10).

Figure 9

At home with parents' permission and from someone under the age of 21 were the most commonly cited sources of alcohol, with 13% obtaining it from home with their parents' permission (Figure 9). The most common locations for students to drink alcohol are at home or someone else's home, with 57% of students drinking at home.

Figure 10

Marijuana and Opiates

Marijuana

According to 2016-2017 Ulster County survey data, 19% of respondents are current users of marijuana. Marijuana use increases substantially as students get older; 3% of 7th graders are current users compared with 39% of 12th graders (Figure 11), and 18% of users have used marijuana on more than five occasions. Age of initiation is similar to that of cigarettes, with 54% reporting initiation between the ages of 12-14. 39% report that they began marijuana use after the age of 15. Synthetic marijuana is considerably less popular among respondents; approximately 3% of students have tried synthetic marijuana, with about 1% reporting current use.

Figure 11

Over two-thirds of respondents feel that smoking marijuana is wrong or very wrong. However, perception drops precipitously as students get older. 92% of seventh graders feel that smoking marijuana is very wrong or wrong, while only 41% of 12th graders feel that smoking marijuana is wrong. Similarly, 70% of 7th graders feel that smoking marijuana places people in risk of harm, while only 32% of 12th graders feel that smoking marijuana once or twice a week is a risk to their well-being.

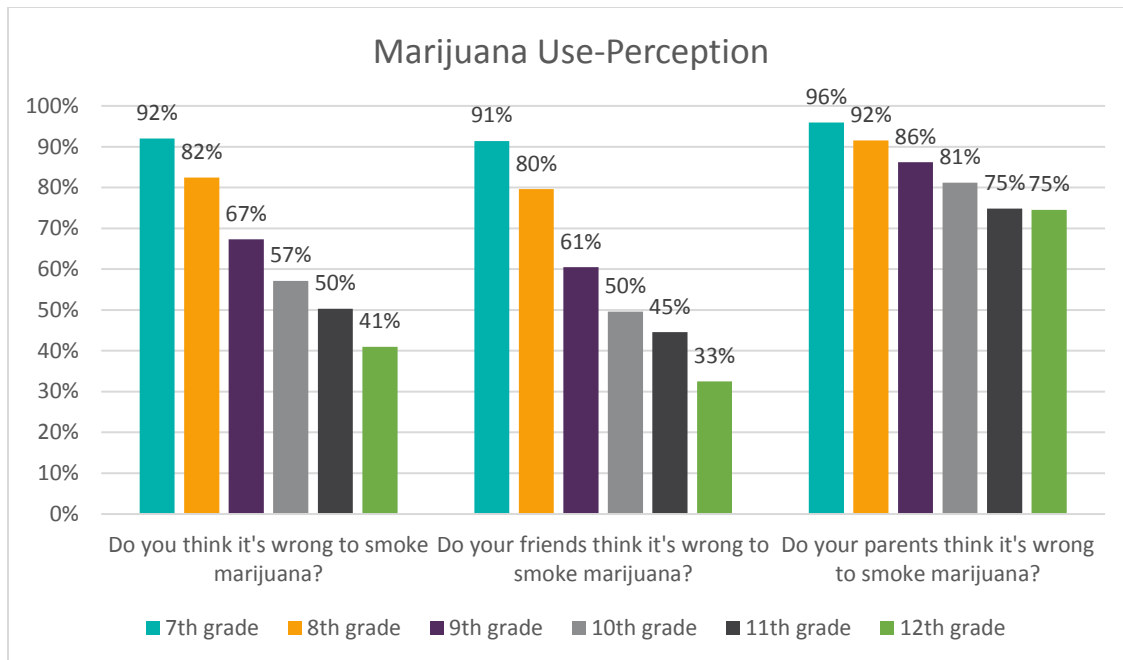

Figure 12

Opiates

According to Ulster County survey data from 2016-2017, less than 1% of Ulster County students report using heroin at least once in their lifetime. However, 5% of students have tried prescription pain relievers at some point in their life; 2% of respondents report using prescription opiates in the past 30 days. Initiation to these drugs begins in later adolescence: 38% of users were over 14 when they first used prescription opiates, 21% first tried them before the age of 12.

Violence and Depression

Family

Students report relatively high levels of family communication; 38% of students have spoken to parents within the past 12 months about the dangers of tobacco use, 47% have spoken with parents about the dangers of alcohol use (Figure 13). 77% of students have clear rules on alcohol use and 58% believe they would be caught if they consumed alcohol without their parents' permission. 5% of students report that their parents would not feel it is wrong to consume alcohol nearly every day. 19% of students feel they have parental permission to pick a fight with someone and 22% of students feel their parents would permit them to gamble.

Consequences for respondents that were caught drinking varied widely; 39% received no consequences, 30% received minor consequences, and 31% received major consequences. The ability to identify family members with severe alcohol problems increases with age. While 35% of 7th graders report a family member has had severe substance problems, 53% of 12th graders have family members that have substance abuse problems.

Figure 13

Depression

Signs of depression are present among respondents of all ages: 40% feel that sometimes life is not worth living, 57% claim they feel like they are no good at all, 43% state they feel like they are a failure, and 39% claim to have felt depressed most days in the past year. Reports of depressive feelings fluctuate with age (Figure 14).

Total	5.2	6.3	28.7	59.6

At times I think I am no good at all.

Grade	Always	Most of the time	Sometimes	Never
7 th	6.0	8.4	40.7	44.6
8 th	7.7	9.6	36.6	46.0
9 th	7.9	11.2	36.7	44.2
10 th	7.5	9.6	38.9	43.8
11 th	8.3	10.8	40.5	40.3
12 th	7.7	10.6	42.7	38.9
Total	7.5	10.0	39.1	43.4

All in all, I am inclined to think that I'm a failure.

Grade	Always	Most of the time	Sometimes	Never
7 th	6.4	8.4	25.6	59.5
8 th	7.7	7.9	26.1	58.3
9 th	8.1	10.4	23.3	58.3
10 th	8.4	6.4	29.9	55.1
11 th	9.3	7.8	27.8	55.2
12 th	7.9	7.7	34.1	50.1
Total	7.9	8.2	27.4	56.4

In the past year, have you felt depressed or sad MOST days, even if you felt okay sometimes?

Grade	Yes	No
7 th	35.9	64.1
8 th	37.9	62.1
9 th	42.8	57.2
10 th	38.3	61.7
11 th	38.9	61.1
12 th	40.1	59.7
Total	38.9	61.1

During the past 30 days, on how many occasions (if any) have you:
used Heroin
